Experience

Property Vista

Software Developer / DevOps Engineer / Technical Architect

2011 - 2025

Led architecture and delivery of a multi-tenant SaaS property management platform, with end-to-end responsibility for reliability, modernization, and developer productivity.

- Migrated core workloads to AWS using Kubernetes (EKS) and Terraform-based Infrastructure as Code for both business and development environments.
- Owned and evolved the company payments platform, ensuring secure integrations and stable transaction processing.
- Implemented observability and platform capabilities (Prometheus, Grafana, ephemeral preview environments) to accelerate development, QA, and incident response.
- Established GitOps-driven configuration management and data retention practices (Soft Delete patterns, configuration auditability).
- Built a Slack-based AI assistant to expose release progress, PR and JIRA status, and availability of test environments for Product, Dev, and QA teams.

Amdocs

Senior Software Developer

1998 - Present

Senior developer and product owner for an enterprise-grade workflow and billing platform used by major telecom operators, designed for performance and reliability in air-gapped, on-premise environments.

- Designed and implemented a Java-based workflow execution engine for large-scale business processes, with multi-stage execution, data persistence, and external system integrations.
- Built and evolved a custom ORM with transactional, multi-database support (PostgreSQL, Oracle, H2), including schema generation, migration, and data retention with background cleanup jobs.
- Implemented REST and SOAP services using Apache CXF and integrated authentication with Keycloak (OAuth2/OpenID Connect) and LDAP/Active Directory.
- Led CI/CD modernization in GitLab, including migration from Bitbucket, centralized Maven repositories, automated testing, and artifact retention policies.
- Containerized the application and introduced Helm-based deployment to Kubernetes (AWS EKS) while maintaining a dual deployment model for traditional executable JARs.

DIGITAL Equipment Corporation (DEC)

Software Engineer

1995 - 1998

Internet based versions Customer care and order-handling systems.

Main Astronomical Observatory of National Academy of Sciences of Ukraine

Programmer-Researcher

1993 - 1994

Developed software for processing results of astronomical observations. Computer Simulation of Mathematical Models of light absorption by dust particles in rotating double star systems.

Education

Moscow Institute of Physics and Technology

M. Sc. in Applied Mathematics and Physics

Moscow, Russia

1987 - 1993

Open Source & Projects

BlueCove

Creator & Maintainer

2007

JSR-82 implementation on J2SE. Available at <http://bluecove.org/>.

MicroEmulator

Core Contributor

2006

Pure Java implementation of J2ME in J2SE.

Skills

Cloud & Infrastructure: Kubernetes, AWS EKS, RDS, Karpenter, Terraform

Monitoring & Observability: Prometheus, Grafana, Loki

Development & Testing Tools: GitLab CI/CD, Chaos Mesh, Toxiproxy, YourKit

E2E Testing Frameworks: Playwright, Selenium, K6

Frameworks: Spring Boot, CXF, Keycloak, Micrometer

AI/ML: LangChain4j, Spring AI, Amazon Bedrock
