Summary

Senior backend engineer and technical architect with deep experience building scalable platforms and distributed systems in Java. Owned and evolved a payments platform, focusing on reliable transaction processing, secure integrations, and production-grade operations on AWS/Kubernetes.

Experience

Property Vista

Technical Architect

2021 - 2025

Application modernization, maintenance, and operations for a SaaS platform, including payments. Accountable for system reliability, outage analysis, and implementing preventive measures to reduce production incidents.

- Owned and evolved the company payments platform, ensuring secure integrations and reliable transaction processing.
- Migrated existing products from monolith to microservices architecture.
- Designed and implemented Data Retention and Compliance strategy, including technical implementation of Soft Delete patterns and configuration auditability.
- Promoted DevOps best practices within the organization, including Infrastructure as Code (IaC) with Terraform.
- Migrated to and maintained Kubernetes infrastructure for business and development workloads (AWS EKS).
- Set up application observability using Prometheus and Grafana for monitoring and alerting.

Amdocs

Senior Software Developer

2019 - 2021

Made the same application deployable and work effectively across Cloud, Air-gapped, and On-Premise environments.

- Java application modernization, AWS Lift and Shift, and Kubernetes deployment (AWS EKS).
- Containerization, Helm Charts, CI/CD with GitLab CI, E2E test automation, and dependency management.
- Maintained dual deployment model supporting both containerized and traditional executable JAR deployments.

Property Vista

Senior Software Developer

2012 - 2019

Built SaaS property management application company from the ground up. Business requirements analysis, SDLC planning and execution. Coder and code reviewer for Java and Infrastructure teams.

- Designed and implemented multi-tenant data access ORM layer with transaction management and scalable automatic database schema migration.
- Owned and evolved the company payments platform, ensuring secure integrations and stable transaction processing.
- Automated business processes for customers and development processes for internal team.

Amdocs

Senior Software Developer

2008 - 2012

Designed and built large-scale business process automation Java platform for major telecom operators from the ground up.

- Designed and implemented Java-based workflow execution engine with multi-stage execution, data persistence, and external system integrations.
- Built custom ORM with transactional, multi-database support (PostgreSQL, Oracle, H2), including schema generation and migration.

Amdocs

Senior Software Developer

1998 - 2008

Payments and Billing systems development and support for major telecom operators.

- Implemented REST and SOAP services using Apache CXF.
- Integrated authentication with LDAP/Active Directory.
- Developed large volume Credit Card transaction processing systems using C++ and PL/SQL.
- Provided production support and performance optimization for billing platforms.

Education

Moscow Institute of Physics and Technology

M. Sc. in Applied Mathematics and Physics

Moscow, Russia

1987 - 1993

Skills

Cloud & Infrastructure: Kubernetes, AWS EKS, RDS, Karpenter, Terraform, Crossplane

Payments: Payment platform ownership, Credit Cards, EFT, Direct Bill Payments, Outbound Payments

Databases: PostgreSQL, Cloud Native PostgreSQL, Oracle, MySQL

Monitoring & Observability: Prometheus, Grafana, Loki, OpenTelemetry, Datadog

Development & Testing Tools: GitLab CI/CD, Chaos Mesh, Toxiproxy, YourKit

E2E Testing Frameworks: Playwright, Selenium, K6

Frameworks: Spring Boot, Resilience4j, Micrometer

AI/ML: LangChain4j, Spring AI, Amazon Bedrock
